

LEAD-WIRE TERMINALS OF ALL-IN-ONE CARD CONNECTOR

ABSTRACT OF THE DISCLOSURE

Lead-wire terminals each are formed of an electroconductive curvy wire. The
5 curvy wire includes a first U-shaped yoke, a second U-shaped yoke, a connecting potion
connected between the first and second yokes, and a contact portion extending
downwards and then parallel from a distal end of the second yoke, wherein each of the
first and second yokes has an opening facing towards the same direction. Accordingly,
the two yokes clamp the card connector by the two yokes to be securely positioned on
10 the card connector.
